Abstract

The Yuan Dynasty was the first regime established by a minority group. It encompassed vast lands where various nations coexisted and formed a unique clothing culture. Braided line robes were a unique type of male attire prevalent in Mongolian society during the 13th and 14th centuries. They were named after the hundreds of litzendraht wires at the waist, which are considered important physical evidence of cultural exchange between the East and West during that specific period and in those regions. Many historical clothing monographs have mentioned that the braid robe was the distinctive attire of the Mongol Nationality during the Yuan Dynasty. However, the research on the braid robe is not comprehensive, the observations are not precise, and there is little discussion about the dressing and the associated expenses. This article focuses on the identity of individuals who wear braided robes. It employs the "literature-figure-object" empirical method to explore who wears the braid and their motivations for doing so.

Keywords

Braid robe, Identity, Ethnic group, Territory

1. Research background

Braid robe is a male robe with unique style that was popular in Mongolian society during 13th century to 14th century, was named due to "the waist as the braid and thin wrinkles", and had double specialties of era and region, had produced profound influence towards both of the surroundings and the clothing in later generations. However, due to the reason of history and nation, the relevant historical data is almost written by the historian of other ethnics, and the words are not very clear, most of them have missed a lot of information, at the same time, it is difficult to discover the tomb in Mongolia-Yuan period, and textile excavated from the land is relatively rare, which leads to that the research of the clothing in Yuan dynasty represented by braid robe is not very deep, it takes the literature information integration as the main part, but has little reference to the critical questions, and the necessary textual research is more deficient.

As illustrated above, based on the research basics on previous period, I integrate relevant object, figure and literature information, take the characters who wear braid robes as the cutting point, discussing the identity of the wearer, dividing the wearing and using range, exploring the deep reason of braid robe being widely popular in Eurasia.

2. The Mongolian race who follows the old customs

"The most important things in the emperor are three, fighting with the soldiers, hunting, and having a banquet" (Wang Yun, Yuan Dynasty) in Mongolian society, hunting is an important event the same as fighting in a war.

Hunting is also a supplement form of nomadic economy of Mongolian, the hunting activity with group, is not only an entertainment activity, but is more of a military activity for training the troop and group to coordinate the manoeuvre (Li Xueqin, Guo Zhikun, & Wen Haiqing, 2018).

There is a hunting painting of Yuan Shizu painted by Li Guandao, the palace painter in Yuan Dynasty, collected in Taipei Palace Museum, the creation was finished in February, Zhiyuan 17th year (1280), it depicts the hunting scenery when Yuan Shizu, Hu Bilie, had an inspection tour on two capitals of Zheng capital, Xia capital and Xing capital. The person who holds the horse rein, looks around and glares is the Yuan Shizu, his clothing and dressing is significantly different from other people, Shizu wears the red jade braid robe inside, fur coat outside, wears the warm hat on the head, a red embroidery boot on the feet. We can see from the figure that there is a dragon-pattern gilt brocade decorated on the breast of the braid robe worn by Shizu, there is also a strip of long knee gown on the undergarment, a waist belt embedded with the gems of various colors on red braid on waist (Fig. 1).

Fig. 1. Hunting Painting of Yuan Shizu and image of Yuan Shizu.

Gilt brocade fabric was very popular in Yuan Dynasty, and the royal nobles especially favored the gilt brocade fabric. According to the statistics of me, the existed braid robes in Mongolia Yuan period has 25, among which 19 of them have gilt brocade fabric, that is the Na Shishi, which is also called Na Chisi, Na Shishi, Na Chixi, etc. That is the transliteration of Farsi, and the language source is Arabic. The weave structure of Na Shishi fabric is unique, and there are two groups of latitude and longitude. They are ground latitude, ground longitude, pattern and concretion longitude, as the flower latitude floats on the texture and used for graining, the golden line is extremely luxury and splendid, is also the indispensable texture of the governor's ceremony banquet and daily life in Mongolia, they use Na Shishi for tailoring clothing, decorating the curtain, awarding the officials, thanking to foreign guests, and funeral (Li Fushun, 2000).

The eight hunters in the center of the picture shown in "Yuan Man Shoots Wild Goose" have different postures, or bow to shoot wild geese, or look up, or dismount and stop, or hold Hai Dongqing ready to go. Among them, five hunters are dressed in braided robes, and the painter depicts the details of braided lines, buckles and pleats with delicate brushstrokes (Fig. 2). The Rossi & Rossi Art Museum in Britain has a braided robe with similar style (Fig. 3).

With the help of the image, it can be seen that the waist of the figure in the braided robe is very docile, and the waist slightly retracted on both sides and the slightly bulging abdomen can be seen. There is such a passage in the History of Dorsang Mongolia that "its (Tatar nationality) is roughly no longer than a Chinese, with broad shoulders and thin waist" (Dosan, 19th century), which is probably what it looks like."

Fig. 2. Yuan People Shooting Wild Geese.

Fig. 3. Dark-flowered twill waistline robe.

The Six Horses Map, which is collected in the Metropolitan Museum of America, has a similar theme to the Wild Goose Shooting Map of the Yuan People, depicting a hunting party resting and reorganizing in the Gobi Desert in the cold winter. According to the painting style and costumes, it is inferred that its age is from the end of the 12th century to the second half of the 13th century. In the picture, there are four Mongolian-dressed men (Fig. 4), one of whom is riding a horse and strolling slowly, while the other three are dismounting and talking. The man standing in the middle has a blue warm hat on his head, a dark green braided robe, white boots, and hands holding Hai Dongqing. The person on the right is wearing a braided robe, and the big red waist line is evenly arranged in the abdomen, and the edge of the warm hat and robe shows rich fur. Mongolians have always attached great importance to riding and shooting. On the other hand, it also reflects that braided robes are widely used in riding and shooting clothing, which is inseparable from the powerful convenience and functionality of braided robes (Xie Fei & He Yang, 2019).

Fig. 4. Six Horses and Characters in Yuan Dynasty Collected by Metropolitan Museum of America.

There are many stone statues scattered in the site of Sukhbaatar province in Mongolia. Among them, three Mongolian stone statues are seated, holding a cup in one hand and praying beads or leaning on their knees in the other. They are dressed in traditional Mongolian clothes with braided lines at the waist. The robe body has two clothes, one is located from the upper arm to the chest, which is similar to the cloud shoulder, and the other is decorated at the knee position (Fig. 5).

Mongolian stone figures were mostly made in the 12th to 14th centuries, mainly distributed in the grassland area of northern Inner Mongolia and Mongolia. At present, all the Mongolian stone figures are men, wearing tunics, Dai Li hats, boots, waist laces, swords, and purses hanging from their sides, and dressed in Mongolian costumes. Its appearance and posture are highly stylized, its face is broad, its cheekbones are prominent, its eyes are small, its eyes are protruding, and its body shape is strong and strong, which is also a typical Mongolian physical feature.

Fig. 5. Mongolian stone men on the site of Bat province in Surh, Mongolia.

The origin of Mongolian stone man can be traced back to the grassland stone man in the Bronze Age. The early grassland stone man was carved from a whole stone, with a height of one to two meters, and only the outline of the basic five senses was engraved, which was a humanoid form similar to wearing a mask. It is generally believed in academic circles that the stone man on the grassland is the embodiment of the early shaman image. Shamanism was formed in the late primitive commune and originated from the Tunguska tribe living near Lake Baikal. It is a natural primitive religion. "Yuan is in grassland, representing the gift of worshiping heaven" (Song Lian, Ming Dynasty). Shamanism is also the primitive religion of the Mongols. These Mongolian stone men were established by the Mongolian royal family or nobles to pay homage to their prominent ancestors.

Mongolian old customs are reborn and buried lightly, leaving no mound piles. After the Mongolian rulers seized power, in order to maintain the original stable social order, many systems adopted the "Chinese law" and retained many old customs of the Han people, including the tomb system and tomb customs.

In July 1982, a Mongolian tomb was discovered in Yuanbaoshan, Chifeng City, Inner Mongolia. Eight murals of the Yuan Dynasty were preserved in the tomb, and the main wall of the tomb was painted with four masters and servants (Fig 6). The couple and the female attendants were placed under the tent, following the old custom of "there is no house to live in, but the tent is home" in Mongolia. The male tomb owner is wearing a light blue braid robe, and the details of the red braid at the waist are clearly visible. For example, in the Story of the Black Tatar, it is said that "the waist is densely pleated, countless ... It is useful to twist red and purple silks into a thread and cross it at the waist, which is called the waist line". It has a warm hat on the back eaves of its head, and several strands of braids behind its ears, called "Postscript Jiao" or "Pojiao", which is a unique hair accessory for Mongolian men. "Up to Genghis, down to the people, all shave Pojiao, such as China children who leave three heads at the fontanel. If it is a little longer, cut it, and if it is twice, the total small horn hangs over the shoulder (Cao Yuanzhong, Qing Dynasty).

Fig. 6. "Tomb owner sitting opposite" mural of Yuan Tomb in Yuanbaoshan district, Chifeng City, Inner Mongolia.

"Figurines, even people, die with them", in order to replace the barbaric habit of human sacrifice, after entering the feudal society, the custom of using pottery figurines as funerary objects gradually rose, and the types and forms of funerary figurines became more and more abundant after the Han and Tang Dynasties. In January 2005, a number of ancient tombs were excavated in the southern suburbs of Xi 'an, among which Wang Shiyong's tomb was among them. Wang Shiyong, a Han official, has been an official in Yuan Dynasty for decades and has served as a general manager of Anxi Palace, a captain of Dunwu, a martial arts officer, a magistrate of Huayin County, and a captain of Zhongyong, who has made great achievements in Yaozhou (Wang Jiugang & Lei Wang, 2008). A number of buried pottery figurines were unearthed in the tomb, one of which was a horse-riding figurine wearing a braided robe and combing a woman's head, wearing a hat with a cymbal on the top, sewing boots on the ankle, carrying a cyst or a box on the waist, are typical images of Mongolian soldiers and officials (Shaanxi Archaeological Research Institute, 2018). This horse-riding figurine is exquisite in workmanship, and the braided lines are arranged evenly and tightly at the waist. In addition, it can be seen that the hem of the braided robe is composed of two pieces of pleated cloth (Fig 7), and the hem of the braided robe overlaps with each other, so it is suitable for strenuous activities such as riding and hunting. The overlapped hidden pendulum has both a warm-keeping effect and ensures wearing comfort and appearance dignity.

Fig. 7. Male figures on horseback unearthed from Wang Shiyong's tomb in Yuan Dynasty in the southern suburbs of Xi'an.

3. Hu-type Han people, an official of Yuanqing

Jin Jie, a Han Chinese in Qucun, was born into a military family and served as an official in the Yuan Dynasty for many years. Jin Jie's portrait is hidden in the Capital Museum, and the top of the portrait is inscribed with Jin Jie's life story. In the picture, Jin Jie sits on the top of the chair, dressed in a dark green braid robe, with a bright red braid at the waist, a gold leather belt tied on it, a jade-topped mantle hat and red boots (Fig. 8). We should pay special attention to the fact that there is a chopping board behind Jin Jie. On the chopping board, there are exhibition feet, a water board, a gold belt and a round neck uniform with a chest and back, which confirms the fact that Mongolian and Chinese costume systems coexisted in the Yuan Dynasty. The Yuan Dynasty was the first political power established by ethnic minorities in the history of China. Yuan Shizu understood the principle that "the world can be ruled immediately, but it can't be ruled immediately", and adopted the "dual system" political strategy of coexistence of "national customs" (Mongolian law) and "Chinese law". When revising the "Yu Fu System", he introduced the clothing system in the Central Plains with reference to the "Chinese law" on the basis of retaining its original clothing customs.

Fig. 8. Jin Jie's portrait in Yuan Dynasty.

The Yuan Tomb in Donger Village, Pucheng County City, Shaanxi Province was built in the 6th year of Yuan Shizu to Yuan Dynasty (1269). The tomb owner and his wife's "sitting in the hall" are located on the north wall, northwest wall, and northeast wall of the tomb. The tomb owner and his wife sit at the back of the circle, and the male owner wears a red tassel hat, a light blue braided robe and red boots. Its robe is tied with a left-handed gown, and the waist and abdomen of the robe are decorated with a big red braid, which means that "the cover wants to tighten the waist immediately and highlight it, and it looks beautiful." The hostess wears an aunt's crown on her head and wears a big-sleeved robe, all of which are Mongolian costumes. The image of the owner of the tomb also appears in the mural paintings of the same tomb, such as "Farewell and Wine Offering" and "Drunkenness and Music Dancing" (Fig 9), and the dress is consistent with the "Sitting in the Hall".

On the top of the screen behind them, there are words written in ink, such as "Niangzi Lishiyun Line is from the house in the middle of the river" and "Zhang Yi Answer No Flowers is from Yidezhou". According to research, the house in the middle of the river is from Puzhou Town, Yongji County, Shanxi Province, and Yidezhou is now Xuanhua, Hebei Province. "Zhang Yi Answer No Flowers" is a naming method of Chinese surname, and it was very common for Han people to change to Mongolian names in Yuan Dynasty. Out of the need of rule, the rulers of the

Yuan Dynasty gave Mongolian names to the Han people from the beginning of Shizu, and the names were given to those who used them, including elite soldiers, celebrities, Confucian scholars, skilled craftsmen and so on. "Yuan Shizu started from Shuomo to have a world and learned that it was made in China by Hu customs. Scholars braided their hair in a vertebral bun, and Hu Mao was deeply impressed, while their clothes were pleated in trousers, narrow sleeves and braided waist" (Zhu Mujie, Ming Dynasty). In the Yuan Dynasty, Han people flaunted the change of political and ethnic affiliation by changing their Mongolian surnames and wearing hoodies, hoping to gain the appreciation of Mongolian rulers.

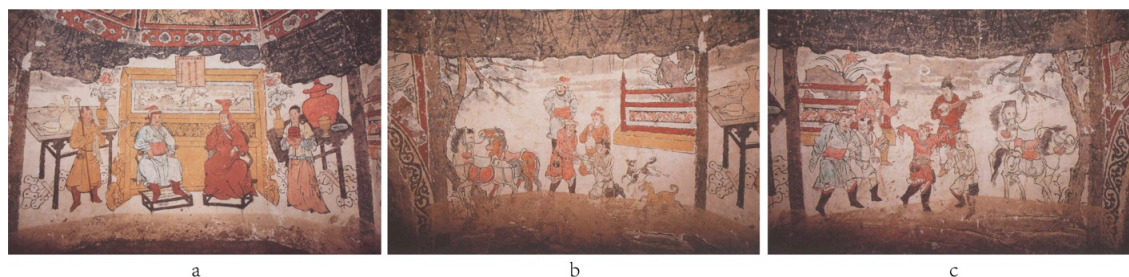

Fig. 9. Murals of Yuan Tomb in Donger Village, Pucheng County, Weinan City, Shaanxi Province. a. "sitting in the hall"; b. "farewell wine offering map"; c. "Drunk to Dance".

"Yi Wei dressed in color: braided coat, made like a narrow sleeve shirt" (Song Lian, Ming Dynasty) for a long time, the image of soldiers and officials in braided robes has become a fixed status symbol and has been used. "It's hard to change after a long time of learning" (Wang Tonggui, Ming Dynasty), there is a clause of "engraving the crown service" (Fig 10) in Ming Dynasty's canonical document "Da Ming Ji Li" and encyclopedic catalogue "San Cai Tu Hui". An eagle harrier with a chest and a waistline coat. Various colors of broad silk plaques, ivory carved rings, and shoes with eight belts are engraved (Xu Yikui, Ming Dynasty) (Wang Qi & Wang Siyi, Ming Dynasty).

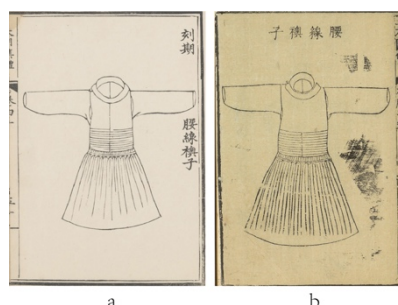

Fig. 10. Illustration of "Carved Crown Dress-Waist Line Coat".

In the Ming Dynasty, the novel "Cut the Lantern" wrote a series of winding and touching love stories with the background of the late Yuan Dynasty and the early Ming Dynasty. The book consists of five volumes and 21 articles, with an illustration at the beginning, among which nine figures in braided robes appeared in six illustrations (Fig. 11). In Volume 1, Ji Fuqing and his best friends Zhao Defu and Jiang Yanyi are after the commandant of Jintan County, Runzhou, in the illustration of "Records of Hospitals under the Jurisdiction of Two Rivers"; Tian Zhu and Wei Junmei in the illustrations of Tian Zhu's Meeting with Xue Tao in Volume 2, Long Sheng, the son of a government official in Volume 3, Xiao Yu, the judge of Yaozhou in Hu Meiniang Biography, and two messengers of scholar's letter and beauty in Volume 4, The Story of Flowers and Candles in the Cave. According to the setting in the article, all the above-mentioned people wearing braided robes are Han Chinese, and their identities are nothing more than those of officialdom, children of government officials, or officials of prominent families. In the Ming dynasty, the scope of Hu fu was gradually expanded. In the beginning, it was "a small hat and a cut-off", but it was served by a servant. Later people tended to be more convenient, although scholars also used it more often (Yu Yonglin, Ming Dynasty). A large number of textiles were unearthed in Zhu Tan's tomb, the tenth son of Zhu Yuanzhang, the king of Lu Huang. Among them, there was a satin plaited robe with gold persimmon and panlong embroidery and sleeves (Fig. 12), which was very similar in shape and characteristics to the braided robe of the Yuan Dynasty.

Fig. 11. Illustration of "New Newspapers Cut Lights".

Fig. 12. The Ming Dynasty's gold-decorated persimmon-covered panlong embroidered robe with long sleeves and satin braid.

4. Uighur people who are proficient in Buddhism

The Uighurs lived in the northern and northwestern regions of China in ancient times. In the early Tang Dynasty, it was named Uighur, and it was also called Uyghur. In the fourth year of Tang Zhenyuan (788), it was renamed Uighur (Zhang Tingting, 2014). At the beginning of the 13th century, Gaochang Uighur surrendered to the Mongolian Empire led by Genghis Khan and was renamed as "Uighur". Shamanism is the traditional belief of the Uighur tribe, and later it turned to Buddhism. "At that time, the Uighur people believed in a warlock named Shaman Man, just like today's Mongols ... The Uighur people once sent an envoy to China who believed in idolatry, delayed the Lama's arrival, argued with Shaman Man, and wanted to choose the winner and follow it ... The idolaters recited a number of bibles before Khan, but Zhushan Man was silent. Therefore, the Uighur first converted to the religion of idols" (Dosan, 19th century). "Shamanism" mentioned in the article is Shamanism, and "idolatry" from China is Buddhism.

The Mongolian rulers in the Yuan Dynasty always respected Buddhism. The Uighur people, who were the main roads of communication between the East and the West for generations, mastered many languages and were familiar with Buddhist scriptures, which were highly valued by the Mongolian rulers. A large number of Uighur people took Buddhism as their stepping stone and engaged in Buddhist research and translation of Confucian classics after entering the Yuan Dynasty.

The translation of Buddhist scriptures is huge and complicated, and it is often done by several generations in the Uighur family, especially the Meng Susi family. Meng Susi's family has a profound Buddhist background, and his "father is afraid of Ali, so he is the commander-in-chief of this department". Meng Su-si was gifted and intelligent. "At the age of fifteen, I know all about my country's books", which won the favor of Mongolian rulers and made me the prime minister. He also married the sister of Queen Hongjila Chabi of Yuan Shizu, and had nine children and as many officials.

At the beginning of the last century, the German investigation team found a family support map of Kublai Khan's near Mutougou kiln in Turpan, in which two larger fragments numbered MIK III 4633a and MIK III 4633b can be assembled into one (Fig. 13). From top to bottom, there are ten monks and four women in the first row. There are thirteen women in the second row; There are 10 men in the third and fourth rows, and there are 47 figures of monks and nuns. Among them, 20 male secular providers are dressed in braided robes and warm hats on their heads, and 17 female providers are also dressed in Mongolian costumes. Only Meng Susi and his father retain the traditional facial features of a high nose and deep eyes, and the other men's and women's faces are close to Mongolians. It can be seen that Meng Susi's family is almost "Mongolian" in terms of clothing and appearance.

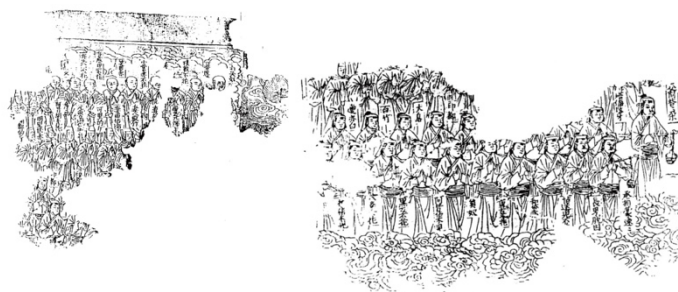

Fig. 13. The picture of the support of the Mundus family in the Indian Art Museum in Berlin, Germany.

During the Song and Yuan Dynasties, the printing industries and paper industries developed rapidly. In addition to official engraving, there were many private engravings. According to Buddhist scriptures, sutra is the dharma body of Buddha, and practicing sutra is like protecting the dharma body of Buddha. Those who carry forward Buddhism not only burn incense and worship Buddha, learn from teachers, recite scriptures and hold incantations, but also contribute money and materials to help temples build towers and print scriptures, and the gains are incalculable.

The spare parts of the title book in the collection of the Indian Art Museum in Berlin (numbered Mikiii IV) and the spare parts of the wishing book in the Academy of Sciences in Brandenburg, Berlin [numbered TM36(U4791)] are from the same book, and the pictures and texts prove each other. In the supporting picture, the supporter in braided robes is a Uighur (Fig. 14), and "Not Yan Chuhei" is the name, "Ba Chuhei". In religion, it means "lay man" (Peter Jim & Wei Wenjie, 2002). It is also recorded in the vows that there are three reasons why Buyan Chuhei Bahei lost this seal: one is to respect and praise to Buddha, the other is to hope that his deceased parents will live in a blessed land, and the third is to realize his self-wish.

Fig. 14. MIK III 4 Gold Collection Zero Book-Details of the Provider.

5. Persian adherents under the iron fighters

Under the leadership of Genghis Khan, Mongolians who lived in Mobei grassland began to fight for more than 40 years, ruling the Central Plains, occupying Central Asia and Volga, and sweeping the Iranian Plateau, and everywhere they went from Asia to Europe, they were invincible. In 1260, Damascus was captured by Mongolian troops, and Xu Liewu, the grandson of Genghis Khan, established the Irkhan country with Iran as the center, which opened the Persian Mongolian dynasty.

Since ancient times, Persia has been in close contact with the Central Plains. Long before the Mongolian army entered, China's art and culture had already influenced the Persian Empire.

Out of respect and admiration for Tiankhan Mongolian Yuan Dynasty, Xu Liewu was ordered to conquer Persia, so he transferred more than 1,000 craftsmen from China and brought China's culture, art and technology to Persia. Take painting as an example. During the Saman Dynasty, Nasr II used China painters to draw illustrations of Persian fables. The lines are fine and vigorous, which is quite characteristic of Chinese traditional painting. The development of Persian painting reached a new height in the period of Irkhand. It absorbed China's ink painting techniques while taking into account its own inherent decorative style, forming a unique painting style between Eastern and Western paintings.

Kings is an epic of Persian national heroes created by Iranian poet Ferdowsi, which is also translated as "The Book of Kings". It describes the rise and fall of the Persian Empire and the life stories of more than 50 emperors. It was once regarded as the official history of Persia, and rulers of all dynasties established the legitimacy of their rule by drawing illustrations of kings (Mu Hongyan, 2017).

Legends of Kings drawn during the reign of the Republic of Irkhand were called the first and second editions of Legends of Kings respectively because of the small size of the manuscript. According to textual research, the two editions of Legends of Kings were drawn around 1300, which is the earliest extant illustrated manuscript of Legends of Kings. Influenced by the Mongolian ruling class, the characters' faces and clothing styles in the first and second chapters of Kings reflect the tendency of Mongolian, and even the images of Persian kings, princes, senior officials and talented men in braided robes have appeared (Fig. 15).

Fig. 15. The first and second illustrations of Kings.

The ruling class of the Ilkhanate, who went to West Asia, is still proud of the descendants of Genghis Khan. They keep their old customs and are keen to spread the culture from Mongolia and the Central Plains on the Iranian plateau. The Islamic Art Museum in Doha and the Islamic Civilization Museum in Sharjah have collections of braided robes from the period of the Irkhanate (Fig. 16), and their styles, structures, technological features and decorative styles are exactly the same as those of the braided robes of the Yuan Dynasty in the same period. The braided robe in the period of Irkhand was made of expensive brocade, which was exquisite and exquisite, so it can be inferred that its owner should have been a Mongolian aristocrat in Irkhand. The first and second illustrations of kings were drawn by artists from the Central Plains or Persian painters who already knew Mongolian culture, which provided a reasonable explanation for the fact that Persian historical heroes were endowed with Mongolian faces and put on braided robes hundreds of years later.

Fig. 16. Brocade robe woven with gold during the period of the Ilkhanate.

6. Conclusion

For a long time, due to the lack of literature and physical data, the research on braided robes has been stagnant for a long time, only staying at the level that braided robes are the characteristic costumes of Mongols in Yuan Dynasty, and there is no innovation breakthrough, and many fields are still blank, especially the identity and wearing scope of braided robes are not clearly defined. Back to the two questions raised in this article, why do people wear braided robes and why do they wear them?

Vertically, according to the existing image data, this paper confirms that braided robes are not exclusive to the Mongolian ruling class. In the Great Mongolia and Yuan Dynasty, they can be worn from the gods down to the

servants. The difference in status is mainly reflected in the different material, color and pattern regulations of the cloth.

Horizontally, most parts of Asia and Europe were ruled by Mongols from 13th to 14th centuries. Besides Mongolians, braided gowns were worn by Han people, Uighur people in Yuan Dynasty and Persians in Irkhand, which broke the stereotype that braided gowns were only for Mongolians.

Through the definition and analysis of the identity and wearing scope of braided robes, the reasons for the widespread popularity of braided robes cannot be simply summarized as ethnic exchanges or ethnic integration, but the deep reasons can be summarized as the following four points: first, the upward mobility in life; second, the political submission and assimilation; third, the positive spread of religion; and fourth, the strong penetration of culture.

In the past, special research on braided robes was limited to the domestic field of vision. However, through the discussion in this paper, it can be seen that there were frequent and rich cultural exchanges between Mongolians and surrounding ethnic groups in the Yuan Dynasty, which provided new ideas and directions for the research on braided robes and other costumes at the same time and also played a role in further exploring the research on costume culture in the Yuan Dynasty.
